Modeling The Autodesk Viewer allows users to review and edit 3D models in the cloud. Finishing The Autodesk finishing suite, originally Autodesk Architectural Desktop, is a set of applications that help architects, designers, and contractors manage building projects, with the goal of improving the quality of the building process. It includes software for architectural design, schematic design, 3D modeling, visualization, drafting, detailing, construction management, and scheduling. The drafting software is used to create and edit 2D and 3D drawings. The schematic design software can be used to create a building database which can be used to create floor plans and 3D drawings. Autodesk Architectural Desktop is also used for project management. Finishing suite is generally used on Windows-based systems, but has also been ported to macOS with the help of virtualization software such as Parallels Desktop, and has been ported to Linux with the help of Wine (formerly called Project Trident). A version for iOS was released in December 2013. In September 2016, Autodesk announced that its architectural software would be available on the Apple Watch, as well as on macOS.
